i3TOUCH ULTRA

Take collaboration to new lengths.

Immersive hybrid meetings start here.

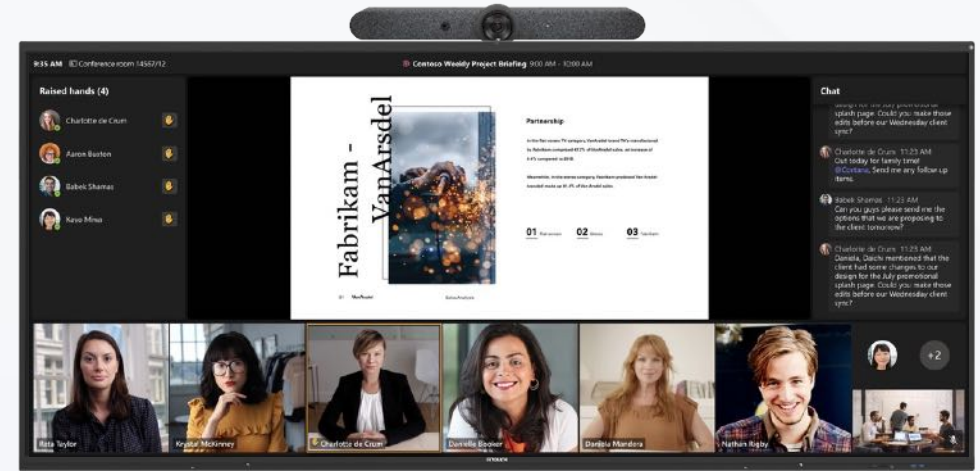

Teams Rooms & Zoom Rooms

The ultra-wide aspect ratio of 21:9 of the i3TOUCH Ultra provides an immersive experience for hybrid meetings. ULTRA is ready for Microsoft Teams Rooms and Zoom Rooms and allows you to use video conferencing tools like Front Row while still having plenty of space to share content and collaborate. Everyone is seen, heard, and represented, whether they are in the room or in a different time zone.

MTR ready and Zoom rooms ready.

Built for visual collaboration.

Promote team engagement by allowing users to share ideas, create content, and interact with it – by whiteboarding, highlighting, and editing. An ultra-wide display means more space for visual collaboration. There's no need to crouch down or overreach to interact with the display (such as in a 16:9 ratio). Start your sprint, review your retrospective, or go wild with your brainstorming session. Walk, talk and annotate as you present, and never run out of room.

Ideal for project management.

From a helicopter view to diving into project details - i3TOUCH Ultra will become your go-to device for project team meetings. Jira, Miro, Mural, BIM, or other specialized software combined with the interactive capabilities of the display will keep everyone engaged and focused.

..and other specialized software

Now bezels don't interfere with your Excel report.

i3TOUCH Ultra comes in handy when you work with Excel files, text and media-rich content, and hyper-detailed drawings or images. Meeting participants can see more information without zooming in and out constantly. Like on any i3TOUCH display, annotate all types of content, save, and share easily.

Innovate and co-create together.

Working together and visualizing, analyzing, and interacting with large amounts of data or scientific content has never been easier.

Adaptive image scaling.

Your software is immediately usable after you have connected and set up your screen. That means you don't need to change anything to get your programs to adapt to your ultrawide display's 21:9 aspect ratio.

Create a multifunctional meeting room with i3TOUCH ULTRA.

From a stand-up scrum room to a video conferencing room, or from a customer-facing room to a brainstorming space, to a training facility - you can transform any room into a multifunctional space with our versatile device.

Display Features

Capacitive sense

The capacitive touch technology creates a very responsive and natural touch experience with a sleek, stylish design.

5K resolution

Hyper-detailed image quality and clarity with a 5K resolution and anti-glare glass.

Ultra-wide

Ultra-wide 21:9 aspect ratio providing ease of use and interactive autonomy on a 105" display.

Multitasking

With the extra space, you can open two, three, or more windows and apps next to each other.

Enhanced clarity

Optical Bonding provides many benefits including, enhanced clarity and viewability, ruggedization, improved heat dissipation and the most accurate touch experience.

Strong craftsmanship

The ultra-slim bezel and glossy accents along with the sturdy craftsmanship create a pleasing high-end aesthetic.

Motion and light sensor

The combination of a motion and light sensor will optimize your viewing experience to all lighting conditions and keep energy consumption balanced.

OPS Slot

Slot for OPS pluggable modules allows for a dedicated computer to be connected to the display with no visible cables.

WIFI

ONE-CABLE CONNECTION

WINDOWS INK

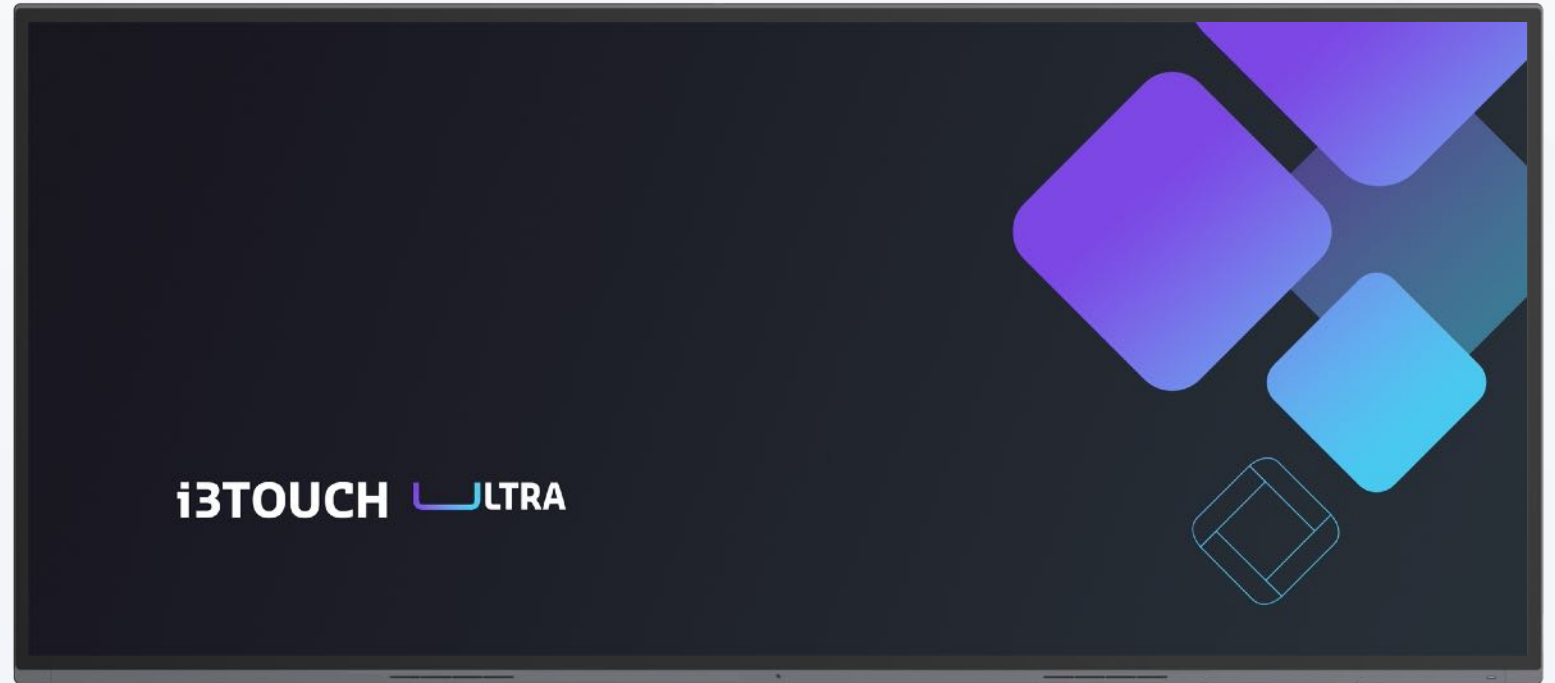

ROOM FILLING AUDIO

SAFETY GLASS

i3TOUCH  **ULTRA**

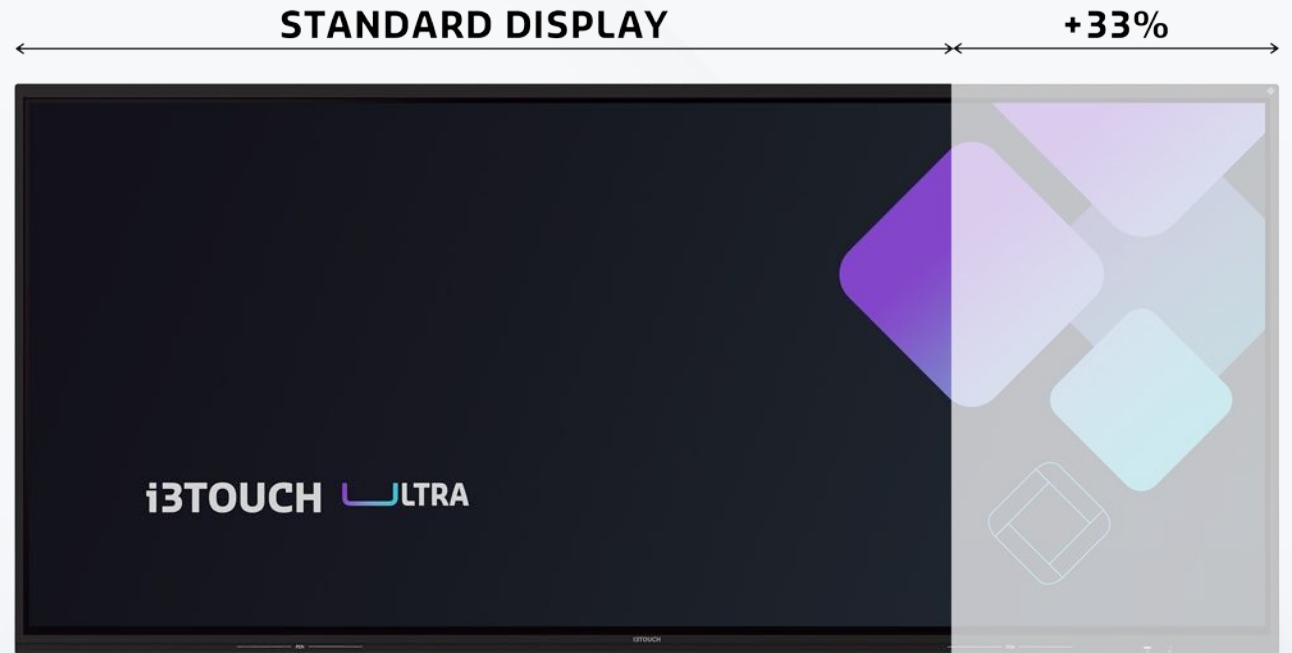

More space for your productivity.

ULTRA-WIDE DISPLAY

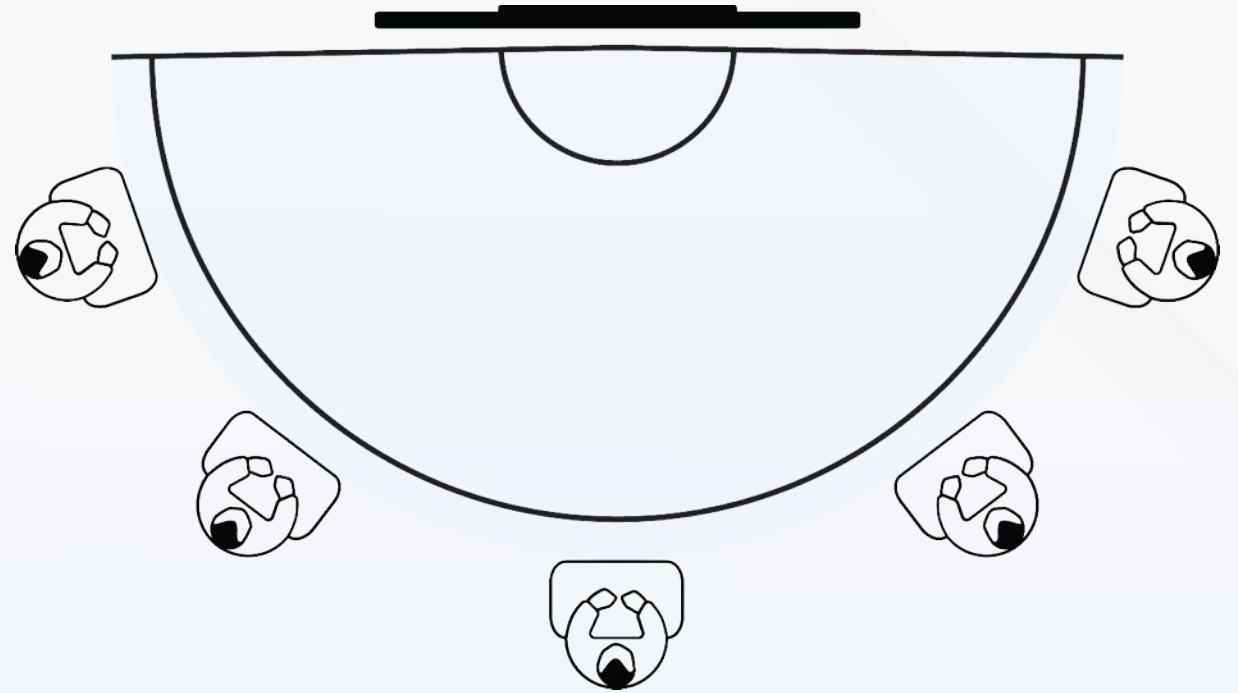

With its ultra-wide 21:9 screen ratio, the i3TOUCH ULTRA displays 33% more content than a standard 16:9 display. With the extra space, i3TOUCH ULTRA is better suited to open two, three, or more windows and apps next to each other. Keep your tools close but not in the way of your workspace.

Improved contrast and wider angles.

Due to the unique aspect ratio and optical bonding technology, ULTRA delivers perfect picture quality in larger spaces no matter where you're sitting. Crowded meeting room or students sitting far away? Everyone will still be able to see the screen without reflections.
